# Deliverable 7: Model Card & Datasheet

This submission is **Deliverable 7**. It contains the technical documentation for the classification model and for the dataset used in my experiment. The scope, structure, and content of the documents are explained in the `README.md` file of the repository.

## Student Dropout Classifier — Model Card & Datasheet

This repository contains an end-to-end machine learning exercise. The goal is to predict the outcomes of higher-education students using a *gradient boosting* classifier. The model sorts students into three categories: *dropout*, *enrolled*, or *graduate*.

The repository includes the *notebook* of the experiment and the two documentation files required by the course:

| Document | Reference standard | Sections | File |
|---|---|---|---|
| Model Card | Mitchell et al. (2019) | 9 | `model_card.md` |
| Datasheet for Datasets | Gebru et al. (2021) | 7 | `datasheet.md` |

## Repository contents

```
.
├── README.md
├── model_card.md
├── datasheet.md
└── Ejercicios_4_5_Dropout_UCI697.ipynb
```

## File descriptions

- `README.md`: gives an overview of the project, its goals, and how the repository is organized.
- `model_card.md`: explains what the model is meant for, how it was evaluated, its limitations, and other important details, following the Model Card framework by Mitchell et al. (2019).
- `datasheet.md`: describes what is in the dataset, how and why it was collected, how it should be used, and its limitations, following the framework by Gebru et al. (2021).
- `Ejercicios_4_5_Dropout_UCI697.ipynb`: the *notebook* I used to run the experiment and generate both documents.

## Purpose of the documentation

The Model Card and the Datasheet go together with the predictive model. They record what the model and the data are like, what they should be used for, how the model was evaluated, and what to be careful about in the data. Together, they help make the work more transparent, more reproducible, and more responsible.
